ALUMNYE PLATFORM

Minutes of Meeting

04 September 2026 | Follow-up Discussion — Login, Sign-up & Registration Flow; Golf Scoring UX; Release Version Planning (v1.4 / v1.5)

1. Meeting Details

Field	Details
Project	Alumnye Platform
Meeting Date	04 September 2026 (Friday)
Time	11:00 AM – 12:00 PM IST; 12:15 PM – 1:00 PM IST
Mode	Online Meeting
Participants	Indeevar, Anand Sivaraman, Sathish Kumar, Lakshmi Chamundeeswari

2. Discussion Items

- Redesign of sign-in vs sign-up screens (single ambiguous screen → distinct flows)
- First-time invite landing flow and post-install onboarding screen
- OTP verification screen refinements (masking, six-digit OTP, copy, button label, "wrong number" navigation)
- Optional biometric authentication (face/fingerprint) for returning users
- Device-based persistence of login identifier (mobile vs email), modelled on banking-app UX
- Session persistence / logout policy (no forced auto-logout)
- Privacy protection for profile data on lost/stolen devices
- Handling of multiple accounts caused by mixed mobile/email sign-in
- Sign-in with Google / Apple — data captured and downstream profile completion
- Terms & Conditions / Privacy Policy link handling and future PDF export
- Behavior for existing logged-in users receiving a new group invite
- Version scoping: what ships in v1.4 vs v1.5
- Existing group (44-member) login/analytics follow-up and interim risk communication
- Golf scorecard layout: landscape/portrait behavior, on-screen player visibility
- Golf handicap entry UX (plus/minus taps vs numeric entry/default)
- Onboarding/startup slides — retain as-is for now
- Preferences-card wording (reunion-specific language confusing non-reunion users)
- Scheduling of next call

3. Discussion Summary & Walkthrough Feedback

3A. First Half (11:00 AM – 12:00 PM) — Login & Registration Screens

#	Topic / Module	Discussion / Observation	Owner	Phase
1	Sign-in vs Sign-up Screens	The screen under review was confirmed to be a sign-in (not sign-up) screen; the team agreed sign-in and sign-up need visually distinct screens, even if similar in layout, to remove ambiguity for first-time vs returning users.	Sathish Kumar / Dev Team	V1.5
2	"Welcome Back" Copy	"Welcome back / Let's get you signed in" copy is only appropriate for confirmed returning users, not first-time sign-up.	Sathish Kumar / Dev Team	V1.5

#	Topic / Module	Discussion / Observation	Owner	Phase
3	Post-Install / Invite Landing Screen	The current landing screen is reunion-specific and must be redesigned into a common landing usable across reunion, golf, and future group types; must clearly orient invited users to the group/event they were invited to.	Sathish Kumar / Dev Team	V1.5
4	Invite-Based Onboarding Flow	Walked through the new-member flow: invite (SMS/email, possibly CSV-driven) → link click → App Store → install → open → OTP. Open question raised on whether invited users hit OTP validation first or land directly on the group after token validation.	Sathish Kumar / Dev Team	V1.5
5	Multiple Accounts (Mobile vs Email)	Confirmed known defect: a user can end up with two accounts by using mobile in one flow and email in another. Directional options discussed — treat mobile or email as a single unique identifier, or mandatorily capture both at sign-up. No technical rule was finalised; team acknowledged Indian users cannot be mobile-only-restricted and non-Indian users cannot be email-only-restricted.	Sathish Kumar / Dev Team	V1.5
6	Device-Based Login Persistence	Proposed persisting the last-used login identifier (mobile/email) on the device, similar to HDFC Bank/Airtel app patterns, so returning users see a masked identifier and go straight to OTP/biometric rather than re-entering it.	Sathish Kumar / Dev Team	V1.5
7	Session Persistence & Logout	Decision to not force auto-logout after 5–10 minutes as banking apps do, since Alumnye is not a banking app and users (e.g., golfers on-course) need extended sessions without repeated OTP friction. Users stay logged in until they explicitly sign out.	Sathish Kumar / Dev Team	V1.5
8	Biometric Authentication	Optional face/fingerprint biometric proposed for returning users as an alternative to OTP on reopen; to be off by default, recommended via a short explanatory note (faster login + better data protection), not mandatory.	Sathish Kumar / Dev Team	V1.5
9	Stolen-Device / Privacy Risk	Discussed exposure of profile info/photos if a phone is stolen and unlocked. Mitigation: encourage biometric app-lock; longer-term, add an extra authentication layer (OTP/biometric) specifically before opening the Profile section.	Sathish Kumar / Dev Team	V1.5 / Future
10	OTP Screen Refinements	Agreed: use a six-digit OTP; mask the phone number on screen; rename "Verify and continue" to "Continue" (redundant with the "Verify your phone" header); remove the "If you don't receive it, verify your number and try resending" helper text and bulb icon.	Sathish Kumar / Dev Team	V1.5
11	"Wrong Number? Go Back"	This link should route back to the correct preceding screen (sign-in or sign-up, based on context) rather than a generic "welcome back" screen in all cases.	Sathish Kumar / Dev Team	V1.5
12	Existing User + New Invite	If an already-logged-in user clicks a new group invite, the app should validate the invite and drop them directly into that group's landing page (new group surfaces under "My Groups") without a full re-login.	Sathish Kumar / Dev Team	V1.5
13	Terms & Conditions / Privacy Policy	Links should open in a way that lets the user easily return (back navigation) to where they were. Future enhancement (not current scope): allow export/save of T&C/Privacy Policy as PDF.	Sathish Kumar / Dev Team	Future

3B. Second Half (12:15 PM – 1:00 PM) — Login/Sign-up Detail, Release Scoping, Golf Scoring UX

#	Topic / Module	Discussion / Observation	Owner	Phase
14	New-User Flow (3 Screens)	Confirmed 3-screen flow: Screen 1 — enter mobile or email, or Sign in with Google/Apple; Screen 2 — OTP verification (sent to whichever identifier was chosen); Screen 3 — Complete Profile (first name, last name, and whichever identifier — mobile or email — was not used to sign in).	Sathish Kumar / Dev Team	V1.5
15	Unique Identity Model	Mobile + email together form the account's unique identity. After first-time setup, a user can log in with either and land in the same account; OTP validation applies to both mobile and email on subsequent logins.	Sathish Kumar / Dev Team	V1.5
16	"Wrong Number, Go Back" Edge Case	Current behaviour on this OTP-screen action is unclear and can lead to 4xx errors or accidental duplicate-account creation. Agreed this is low-probability but must be explicitly documented and planned, not left ambiguous.	Sathish Kumar / Dev Team	V1.5
17	Sign in with Google / Apple	Google returns first name, last name, email only (no mobile). Apple returns first/last name and an encrypted/relay email token (no mobile). Both cases land the user on Screen 3 (Complete Profile) with name/email pre-filled and mobile left blank for the user to enter (not required to be the device's own number).	Sathish Kumar / Dev Team	V1.5
18	Post-Sign-Out Re-Entry	After sign-out, opening the app always shows Screen 1 again; authentication (OTP or Google/Apple) then lands the user directly on the member landing page without repeating profile completion.	Sathish Kumar / Dev Team	V1.5
19	Screen 1 Copy	"Welcome back" must be removed from Screen 1 since it also serves first-time users arriving via direct store download; standardise on "Sign in" wording (sign-up-specific copy to be decided later).	Sathish Kumar / Dev Team	V1.5
20	Onboarding/Startup Slides	The three existing intro/startup slides will be retained as-is for now, since upcoming groups are primarily reunion use cases; a revised version for golf/sports groups is a future, non-urgent item.	Sathish Kumar / Dev Team	Backlog
21	Existing 44-Member Group	Not all 44 members of a specific group have logged in yet; some are downloading fresh and logging in via email instead of mobile, landing on a different account with no event visibility — a direct symptom of the identity-mapping gap (#5 / #15) until v1.5 ships.	Sathish Kumar / Dev Team	Interim Risk
22	Group-Creation → Event → SMS Sequence	Confirmed sequence: app download → group membership created → event created (triggers SMS, e.g. "You are now added to the list of participants… all details in your Anand app"). Assumes the user already has the app installed by the time the event SMS arrives.	Sathish Kumar / Dev Team	Reference
23	Member Landing Page (No Events)	A new user (e.g., an Anchor) may land on a landing page with no events; the default preferences card is shown, but its current wording (e.g., single/double room) reads as reunion-specific and may confuse golf/other-category users — flagged for future rewording.	Sathish Kumar / Dev Team	Future
24	Version Scoping (v1.4 vs v1.5)	Clarified after some confusion: today's login/sign-up and landing-flow changes ship in v1.5. v1.4 covers previously agreed items — time separation and category separation on events (reunion vs golf/sports).	Sathish Kumar / Dev Team	Decision

#	Topic / Module	Discussion / Observation	Owner	Phase
25	Golf Scorecard — Landscape/Portrait	Scorecard view should support both portrait and landscape; the live scoring screen is intentionally portrait-only, which the group accepted. A landscape-responsiveness issue was seen on one Google/Android phone (likely auto-rotate sensitivity) and eventually resolved itself — needs verification.	Sathish Kumar	Enhancement
26	Golf Scorecard — Player Visibility	With four players, the layout currently requires scrolling, and the first player's name can scroll off-screen while entering the fourth player's score. Team wants a compressed layout so all four players stay visible without scrolling, plus better use of right-side whitespace and lines between players.	Sathish Kumar	Enhancement
27	Golf Handicap Entry	Handicap is currently adjusted only via plus/minus taps, which is slow and error-prone for common values (e.g., needing many taps to reach 18, with risk of overshoot). Proposed: direct numeric entry, or default the handicap to 18 (or another sensible value) and let users adjust from there.	Sathish Kumar / Dev Team	Enhancement, not urgent
28	Upcoming Monday Golf Game	Monday morning's game will run live on the app; captains draw sheets and enter scores in the next couple of days. Expectation: no previously-fixed issues resurface; only new/unexpected teething issues are acceptable.	Sathish Kumar / Dev Team	Operational
29	Global FinTech Fest / Marketing Window	Indeevar has a high-visibility week (Global FinTech Fest) ahead. Having v1.4 (and ideally v1.5) live early would support live product demos and marketing conversations during that week.	Indeevar	Context

4. Key Decisions

#	Decision	Rationale / Impact
D1	Sign-in and sign-up will be built as distinct screens (not one ambiguous screen), with copy conditioned on true user state ("Welcome back" only for confirmed returning users).	Removes the core source of confusion flagged repeatedly across both sessions and prevents mismatched messaging for first-time users.
D2	The post-install/invite landing screen will be redesigned as a common, non-reunion-specific landing that works across reunion, golf, and future group types.	Supports the platform's multi-category direction and improves first impressions for non-reunion invitees.
D3	No forced auto-logout; sessions persist until explicit sign-out, with optional biometric authentication offered (off by default) as the primary mitigation for stolen/unlocked-device risk.	Matches actual usage patterns (e.g., golfers on-course over long durations) while keeping a security option available without adding friction for everyone.
D4	OTP will be six digits, with the phone number masked on-screen, simplified button/help copy, and a "Wrong number? Go back" action that returns to the correct prior screen.	Reduces UI clutter and prevents users from being dropped into the wrong flow after a correction.
D5	Mobile and email together constitute the account's unique identity; after first-time setup either can be used to log in, but the exact enforcement rule (single identifier vs mandatory dual capture) is still to be finalised and documented.	Directly addresses the duplicate-account defect affecting the current 44-member group rollout; treated as high priority for v1.5.
D6	Sign in with Google/Apple always routes to the Complete Profile screen (Screen 3) with name/email pre-filled and mobile requested separately, since neither provider supplies a mobile number.	Keeps the dual-identifier model consistent regardless of entry method.

#	Decision	Rationale / Impact
D7	Today's login/sign-up and related landing-flow changes are scoped to v1.5, not v1.4. v1.4 remains scoped to event time/category separation only.	Prevents scope creep into the nearer-term v1.4 release and sets clear stakeholder expectations.
D8	The three existing onboarding/startup slides are retained unchanged for the current reunion-focused rollout window; a golf/sports-specific version is deferred.	Avoids non-critical rework during an active usage period.
D9	Golf scoring screen stays portrait-only by design; scorecard view continues to support landscape.	Confirmed as acceptable trade-off by the group; no further discussion needed unless new issues surface.

5. Action Items Register

AI-ID	Area	Action Required	Owner	Due / Phase
AI-0409-01	Onboarding / Landing	Redesign the first-time invite landing flow onto a common (non-union-specific) screen; share the updated design for team agreement.	Sathish Kumar / Dev Team	V1.5
AI-0409-02	Biometric	Add optional biometric authentication for returning users, with an encouraging (non-mandatory) note explaining the benefit.	Sathish Kumar / Dev Team	V1.5
AI-0409-03	OTP Screen	Mask the phone number, use a six-digit OTP, remove the redundant helper message and bulb icon, rename "Verify and continue" to "Continue," and route "Wrong number. Go back" to the correct preceding screen.	Sathish Kumar / Dev Team	V1.5
AI-0409-04	Identity Strategy	Finalize and document whether mobile, email, or both is the primary unique identifier; define handling for invite-number mismatches and users who forget which identifier they used.	Sathish Kumar / Dev Team	V1.5
AI-0409-05	Invite Flows	Implement/refine both paths: existing logged-in user clicking an invite (validate → land in new group) and new user without the app (invite → install → open → OTP → group landing). Document matching vs non-matching paths.	Sathish Kumar / Dev Team	V1.5
AI-0409-06	Decision Log	Record in the project decision log: no forced auto-logout (with rationale), six-digit OTP, optional biometric, and future extra protection for the Profile section; capture T&C/Privacy Policy PDF export as a future item.	Sathish Kumar / Dev Team	V1.5
AI-0409-07	"Wrong Number, Go Back" Edge Case	Define and document navigation behavior to eliminate 4xx errors and accidental duplicate-account creation from this action.	Sathish Kumar / Dev Team	V1.5
AI-0409-08	Screen 1 Copy	Remove "Welcome back" from Screen 1; standardize "Sign in with Google/Apple" wording; keep sign-up vs sign-in internally clear even before it's exposed in copy.	Sathish Kumar / Dev Team	V1.5
AI-0409-09	Preferences Copy	Revisit preferences-card wording (e.g., room type) so it doesn't confuse golf/non-reunion users and clearly scopes to event-specific vs general profile context.	Sathish Kumar / Dev Team	Future, not urgent

AI-ID	Area	Action Required	Owner	Due / Phase
AI-0409-10	Golf Scorecard Layout	Compress the scorecard so all four players remain visible on one screen without scrolling; use available right-side whitespace and reduce empty space; add separators between players.	Sathish Kumar	Enhancement backlog
AI-0409-11	Golf Handicap Entry	Evaluate direct numeric entry for handicap, or default to 18, to reduce repetitive plus/minus tapping.	Sathish Kumar	Enhancement backlog
AI-0409-12	Landscape Rotation	Check Android/Google-phone landscape-rotation responsiveness on the scorecard view and adjust rotation sensitivity/thresholds if needed.	Sathish Kumar / Dev Team	Enhancement backlog
AI-0409-13	44-Member Group Analytics	Run a detailed analytics review of the 44-person group to determine how many members have logged in and used the app.	Sathish Kumar / Dev Team	Interim, before V1.5
AI-0409-14	Stakeholder Risk Email	Send Indeevar an email covering current known issues, temporary workarounds (e.g., "don't log in with email if your event is tied to your mobile"), and likely error messages/failure modes until v1.5 ships.	Sathish Kumar	V1.3.1
AI-0409-15	WhatsApp Friction Log	Team to proactively post foreseeable user-confusion points (sign-in vs sign-up, email vs mobile) and real defects to the project WhatsApp group so Indeevar can prepare live talking points during the high-traffic period.	Whole Team	Ongoing
AI-0409-16	Version Communication	Prepare and share a simple v1.4-vs-v1.5 feature list with stakeholders (including Anand) so expectations on timing are clear.	Sathish Kumar	Immediate
AI-0409-17	Next Call	Confirm exact time and send invite for the next call, agreed for Tuesday morning (Monday afternoon is blocked; Tuesday afternoon less convenient).	Lakshmi	Immediate
AI-0409-18	WhatsApp Follow-up	Bring the meeting participants back into the WhatsApp discussion thread when the meeting resumes/continues.	Team	Immediate

6. Next Steps

- Finalize and share the redesigned invite-landing and sign-in/sign-up screens for team sign-off.
- Lock the mobile/email identity strategy and document handling for mismatched or forgotten identifiers — this is the root cause behind the current 44-member group's login/visibility issue.
- Implement the OTP screen refinements (masking, six-digit OTP, copy cleanup, corrected back-navigation) and the optional biometric flow.
- Document the "wrong number, go back" edge case to eliminate 4xx errors and duplicate accounts.
- Confirm and circulate the v1.4 vs v1.5 feature split to Indeevar.
- Send the interim risk/workaround email to Indeevar and start logging friction points on the project WhatsApp group.
- Run the 44-member group login/usage analytics review.
- Queue the golf scorecard layout, handicap-entry, and landscape-sensitivity items as post-critical enhancements ahead of or shortly after the upcoming Monday game.
- Confirm Tuesday morning as the next call and send the invite.
