ALUMNYE PLATFORM

Minutes of Meeting

11 August 2026 | Vendor Migration, Event Classification, Payments & Photo Engagement Review

1. Meeting Details

Field	Details
Project	Alumnye Platform
Meeting Date	11 August 2026 (Tuesday)
Mode	Face to Face meeting
Participants	Indeevar, Anand Sivaraman, Sathish Kumar and Nishalini

2. Discussion Items

- Vendor reliability (Karix) and its impact on Netcore migration planning; next steps on a structured API/endpoint discussion with Karix
- Group/member data cleanup, invitation logic (mobile vs. email), and duplicate-identity risk
- Notice Board file-type and download limitations
- Tile classification (Poll, Itinerary, RSVP Launch, Cost GPT, Travel, Travel Preferences) and a proposed Sports vs. Reunion/Social category refactor
- Feature scope for v1.2 (notice board fixes, anchor match-edit) and v1.3+ (multiple anchors per event/group, category-driven landing pages)
- Green Buddies reputational risk and CSGI 40 as the primary non-golf pilot group
- Payments design: simple screenshot-to-Excel reconciliation model vs. advanced Cost GPT-driven, Razorpay-based split-payment model; regulatory stance on holding funds
- OCR for payment screenshots and scorecards, including HyperVerge as a potential OCR partner
- Photo/video engagement: current manual clean-up reality, desired per-member photo repositories and auto-generated profile montages, and an interim manual (Canva) plan
- Documentation hygiene (product/tech docs, change log) and photo/video usage metrics tracking

3. Discussion Summary & Walkthrough Feedback

#	Topic / Module	Discussion / Observation	Owner	Phase
1	Karix Issues	Current vendor (Karix) described as “customer non-central” and unprofessional, particularly around non-reachability. Its unreliability is actively blocking the Netcore migration and derailing other ongoing efforts.	Prodian Team	Process
2	Karix — Next Steps	Plan to start a structured API/endpoint discussion with Karix, share existing technical docs, and be ready to adjust internal designs once Karix responds.	Sathish	Process
3	Group Member Management & Naming	Member names need cleanup (spelling corrections, e.g., 1) Ajay Kashyap; 2) Amandeep; 3) Saurav) and a corrected list needs to be uploaded. Clarified how invites are sent (mobile vs. email) and how that affects identity and logins.	Anand	Delta
4	Member Invitation Logic (Mobile vs. Email)	Backend stores both mobile and email, prioritising mobile for invites; failed international/Karix SMS falls back to email. Risk identified: invite sent via mobile but member logs in with a different email, creating duplicate accounts. Mitigation for now: backend bulk uploads only, avoiding self-sign-up.	Dev Team	Next Phase
5	Notice Board & File Handling	Anchors/members use the Notice Board for announcements, rules, and documents. Current limitations: some versions support images only; supported file types include PDF and ZIP but not Word docs; download	Dev Team	V1.3

#	Topic / Module	Discussion / Observation	Owner	Phase
		option may be missing in v1.1 (screenshots suggested as a temporary workaround).		
6	Generic vs. Specific Tiles	Tiles reviewed: Poll, Itinerary, Launch RSVP, Travel Preferences, Cost GPT, Travel. Classified as generic/multi-purpose (Poll, Itinerary, RSVP Launch — usable for any event) vs. reunion-specific (Cost GPT, Travel, Travel Preferences).	Product	V1.3
7	Activity / Golf / Sports / Reunion Classification	"Activity" today is effectively golf-only, though conceptually golf, tennis, bridge, and reunion dinners are all "activities." Proposed refactor: split into clear categories (Sports — golf, tennis, bridge, etc.; Reunion/Social), using the event category field (networking, professional, social, sports, culture, etc.) at event creation to drive different landing pages and tile sets. For sports events, propose a sports-selection tile list feeding into a sport-specific flow.	Product/Dev	v1.3+
8	Version 1.2 Scope	Includes Notice Board fixes, image-handling improvements, more stable event flows, and anchor match-edit capability (anchor can edit match properties) — currently in testing, targeted for 1.2 or shortly after.	Dev Team	v1.2
9	Version 1.3 / Future Scope	Multiple anchors per event/group slotted for v1.3 as a larger feature. Possible separation of tiles/landing flows by event type (e.g., relevant to the 29 August event) depending on priority.	Product	To try feasibility for v1.3
10	Green Buddies — Reputational Risk	Green Buddies (golf group) has been used extensively for early testing. Further glitches — especially basic ones — risk damaging trust among senior, discerning users (e.g., ex-bankers benchmarking against Polaris, Infosys, etc.).	Anand	Process
11	CSGI 40 Pilot Strategy	Target group of ~69 members. Plan: backend bulk upload of names/emails/mobiles; Anand acts as anchor and pre-builds profiles and photos using existing generative tools so members see ready-made content on first login. Many of the 69 are potential anchors for their own sub-groups (Dubai gang, New York golf friends, RWAs, etc.), creating a network effect.	Anand	Pilot
12	Testing Priorities	Non-golf use cases must be solid before opening more groups. Immediate focus: CSGI 40 as the primary non-golf pilot, payments flows, and photos/profiles.	Product	Process
13	Payments — Simple Model	Members pay the merchant directly and upload a payment screenshot; the system treats an upload as "paid = yes" (subject to later checks) and builds an Excel sheet (Name, Paid Y/N, Amount, Transaction reference). Anchor exports this for the merchant to reconcile. Purpose: solve the organiser's tracking headache without the app holding money.	Anand/Dev	Next Phase
14	OCR for Payment Screenshots	Idea to extract amount and other fields via OCR. Hyperverse mentioned as an experienced partner for payment-confirmation OCR and golf-scorecard/structured-document OCR. Discussion covered accuracy-vs-cost trade-offs and the need for efficiency benchmarks, drawing on other OCR experience (insurance documents, handwritten vs. printed).	Dev/Vendor	Roadmap
15	Payments — Advanced Model	For large, multi-merchant events (hotel, cabs, students, etc.): use Cost GPT to estimate budget and derive an approved allocation formula (e.g., 75% hotel / 15% cabs / 10% others); each member payment is sliced per formula and pushed to merchants daily via a payment aggregator (e.g., Razorpay). Key principle: the app never holds money overnight, avoiding wallet/PPI licensing. Merchants receive daily and final consolidated reconciliation statements.	Product/Dev	Roadmap
16	Regulatory Stance on Holding Funds	Debate on whether funds can legally be held; conservative working assumption is that they cannot without a payment licence, which drives the design toward immediate or next-day pass-through.	Discussion point	Process
17	Photos/Videos — Current Reality	Anchors typically hold thousands of photos; many are near-duplicates (true uniques ~1,000–1,500 out of 5,000). Clean-up today is manual/brute-force, as humans remain fastest at selecting best shots.	Indeevar	Process
18	Desired Photo/Video Experience	Per-member photo repositories where anchors can upload photos into a member's area (a multi-person photo copied into each relevant member's area). Automatic photo-to-video montage per member: user/anchor-chosen	Dev team	Roadmap

#	Topic / Module	Discussion / Observation	Owner	Phase
		photo order, configurable per-photo display time (default ~2 seconds), optional background music — shown on the member's profile. Comparable to iPhone Memories/Google Photos; question of build-vs-reuse of existing components/APIs remains open.		
19	Interim Photo/Video Plan	Manually create short montage videos in Canva over the next few days and supply them to the dev team for backend attachment to profiles.	Indeevar / Dev team	Interim
20	Documentation & API/Endpoint Specs	Product and technical documentation must reflect newly added features (golf, Cost GPT, OCR usage, payment flows) and endpoint/category changes, with a maintained change log.	Sathish/Lakshmi	Process
21	Karix / API Docs Flow	Send current API specs to the client for review and use them as the basis for the Karix integration discussion (see #3).	Sathish	Process
22	Photo/Video Metrics Tracking	Other projects have tracked up to 16 metrics; here only 4–5 key metrics are needed (e.g., storage, usage, possibly engagement). Plan to ask Shrikanth how he tracks multi-phone photo/video flows and adapt that approach.	Dev Team	Process

4. Key Decisions

#	Decision	Rationale / Impact
D1	Prioritise non-golf flows — especially for group CSGI 40 — over new external opportunities (insurance sales, other communities); immediate emphasis on payments, profile/photo-video experience, and stabilising generic tiles (Poll, Itinerary, RSVP).	Focuses limited team bandwidth on proving the platform beyond golf before expanding scope.
D2	Green Buddies will not be stressed with further risky tests until Karix/notification issues are under control; CSGI 40 becomes the main pilot group for the next stage, using backend uploads and pre-built profiles.	Protects a reputationally sensitive, senior-user group while validating non-golf flows on a fresh, controlled cohort.
D3	Payments architecture principle: the app must not hold funds — all flows (single or multi-merchant) are designed to flush funds to merchants quickly. Near term: "members pay merchant directly + screenshot + Excel export" for simple/single-merchant events. Future: Cost GPT-defined allocation formulas with automatic splitting via a payment aggregator.	Keeps the platform compliant with current regulatory interpretation (avoids wallet/PPI licensing) while still solving the organiser's reconciliation problem.
D4	Conceptual agreement to treat Reunion/Social and Sports as separate high-level event categories, keep a small set of generic tiles (Poll, Itinerary, RSVP) always available, and place reunion-specific and sports-specific tiles under their respective categories. Implementation targeted for v1.3+.	Removes the current golf-only framing of "Activity" and creates a scalable, category-driven tile/landing-page model.
D5	For upcoming pilots (e.g., CSGI 40), prefer backend bulk uploads of verified emails/mobiles over self-sign-up flows, to avoid duplicate identities from invite-via-mobile/login-via-different-email mismatches.	Reduces identity-management risk until a more robust reconciliation mechanism exists.
D6	Photo-to-short-video montage on profile confirmed as a high-value engagement feature. Short term: Indeevar creates these manually; medium term: an anchor-owned in-app tool is desirable.	Balances immediate user delight against the cost of building an automated pipeline before it's proven valuable.
D7	Tech/product documentation must be kept in sync with evolving functionality — especially golf, Cost GPT, payment/OCR flows, and new landing pages/tiles — with a maintained change log.	Supports audit traceability and reduces onboarding/handoff friction as features change quickly.

5. Action Items Register

AI-ID	Area	Action Required	Owner	Due / Phase
AI-1108-01	Data & Group Setup	Prepare a complete, corrected list of CSGI 40 member names (fixing spellings 1) Ajay Kashyap; 2) Amandeep; 3) Saurav) emails, mobiles, and other relevant fields.	Dev Team	This week
AI-1108-02	Data & Group Setup	Export the full CSGI 40 contact list (names, emails, mobiles, other fields) and share with the dev team.	Indeevar	This week
AI-1108-03	Data & Group Setup	Use the shared CSGI 40 data to create member records and group memberships via backend bulk upload.	Dev Team	This week
AI-1108-04	Features & Testing	End-to-end test of the itinerary "add schedule" feature: manual schedule creation, Excel template download/import, and PDF upload.	Prodian Team (functional testing) + Dev Team (support)	Before CSGI 40 rollout
AI-1108-05	Features & Testing	Validate that Poll, Itinerary, and RSVP Launch tiles are available and usable for non-reunion, non-golf events.	Dev Team, with feedback from Anand	Before CSGI 40 rollout
AI-1108-06	Payments	Design and implement the screenshot-upload → Excel-export payment confirmation flow, with OCR field extraction where feasible. (Owner split noted in source recording but cut off before full assignment — confirm final build owner.)	Dev Team (build)	Next Phase
AI-1108-07	Payments	Evaluate Hyperverge (or a comparable partner) for OCR on payment screenshots and scorecards; benchmark accuracy vs. cost.	Dev Team	Roadmap
AI-1108-08	Payments	Design the Cost GPT-driven allocation formula and daily Razorpay split-payment architecture for multi-merchant events.	Dev Team	Roadmap
AI-1108-09	Payments	Confirm the regulatory position on fund holding (no-hold / next-day flush) with legal/compliance before building the advanced payment flow.	Indeevar / Dev team	Before roadmap build
AI-1108-10	Product/UX	Correct member name spellings and re-upload the corrected member list.	Dev Team	This week
AI-1108-11	Product/UX	Document invite delivery logic (mobile-priority, email fallback) and define the duplicate-account mitigation approach for future self-sign-up support.	Dev Team	v1.2 / Delta
AI-1108-12	Product/UX	Extend Notice Board file support beyond images/PDF/ZIP to include Word documents; confirm whether the download option ships in v1.1.	Dev Team	v1.2 / Delta
AI-1108-13	Product/UX	Scope and design the Sports vs. Reunion/Social event-category refactor, including category-driven landing pages and tile sets.	Dev Team	v1.3
AI-1108-14	Product/UX	Scope the multiple-anchors-per-event/group capability.	Dev Team	v1.3
AI-1108-15	Release	Complete testing of the anchor match-edit capability and confirm whether it ships with v1.2 or immediately after.	Dev Team	v1.2
AI-1108-16	Vendor Management	Finalise API/endpoint specs and share with Karix to open a structured integration discussion ahead of the Netcore migration decision.	Sathish	This week
AI-1108-17	Media / Engagement	Manually create short photo/video montages in Canva and supply them to the dev team for backend attachment to member profiles.	Anand Sivaraman	Next few days
AI-1108-18	Media / Engagement	Scope the automatic photo-to-video montage feature (photo ordering, configurable display time, background music) for member profiles.	Dev Team	Roadmap
AI-1108-19	Documentation	Update product/technical documentation and maintain a change log covering golf, Cost GPT, OCR, payment flows, and event-category changes.	Sathish	Ongoing

AI-ID	Area	Action Required	Owner	Due / Phase
AI-1108-20	Analytics	Consult Shrikanth on his approach to tracking multi-phone photo/video flows and define the 4–5 key metrics (e.g., storage, usage, engagement) to track here.	Dev Team	This week

6. Next Steps

- Complete CSGI 40 data cleanup and export; proceed with backend bulk upload so the group can start using the app.
- Complete itinerary “add schedule” and generic-tile (Poll/Itinerary/RSVP) testing ahead of CSGI 40 rollout.
- Build and test the simple screenshot-to-Excel payment reconciliation flow; evaluate OCR partners (e.g., Hyperverge) in parallel.
- Progress the Cost GPT-driven, Razorpay-based advanced payment architecture on the roadmap track, pending legal confirmation on fund-holding rules.
- Fix member-name data and invite-logic documentation; hold self-sign-up in favour of backend bulk uploads for now.
- Advance Notice Board file-type/download fixes and anchor match-edit testing toward v1.2.
- Scope the Sports vs. Reunion/Social category refactor and multi-anchor capability for v1.3.
- Share finalised API/endpoint specs with Karix and continue the Netcore migration evaluation.
- Anand to deliver interim Canva-based profile montage videos; dev team to scope the automated version.
- Keep product/technical documentation and change log current; align with Shrikanth on photo/video metrics tracking.
