ALUMNYE PLATFORM

Minutes of Meeting

25 August 2026 | v1.3 Release Readiness — UX, Testing & Priority Alignment Review

1. Meeting Details

Field	Details
Project	Alumnye Platform
Meeting Date	25 August 2026 (Tuesday)
Mode	Online Meeting
Participants	Indeevar, Anand Sivaraman, Sathish Kumar, Lakshmi, Hemnath, Nishalini.

2. Discussion Items

- Clarity of communication in user-feedback emails and expectations for pinpointing unclear steps vs. unclear defects
- LinkedIn profile data-extraction limitations and the AI biography-generation workflow
- UX gap: the editability of AI-generated biography text is not intuitive to anchors
- Design/logical-flow defects vs. functional defects — how each should be classified and tested
- Root cause of the "Unnamed group" landing issue being missed in component testing despite being raised
- Commitments to strengthen unit testing and code review ahead of and after the 1.3 release
- Status of core MVP flows versus recent Golf / DLT / promotional-notification work
- Stack-ranked priorities for v1.3: end-to-end login/onboarding, reunion enablement, media posting, profile/bio
- v1.3 release-note content and documentation/inventory plan (decision-points Excel, observations sheet)
- Post-release 36–48 hour iterative testing and validation plan
- Follow-up communication plan (text/WhatsApp) to close out remaining clarifications

3. Discussion Summary & Walkthrough Feedback

#	Topic / Module	Discussion / Observation	Owner
1	Communication & Defect Reporting	Lakshmi referred to user feedback Indeevar had emailed the previous evening (~7:30 pm). Indeevar pushed back on the framing "steps are clear but we have questions on the defect," arguing that an unclear defect implies an unclear step or flow, and asked the team to point to the exact step causing confusion so his communication could improve.	Discussion Point
2	LinkedIn Profile / Bio — Current Design	Reaffirmed that LinkedIn data cannot be legally scraped (Firecrawl remains explicitly out of scope for LinkedIn). The LinkedIn URL is stored on the profile only; biography text is AI-generated from profile fields or pasted text, not from live LinkedIn extraction.	Discussion Point
3	LinkedIn / Bio — UX Problem Identified	From the anchor's perspective, after providing a LinkedIn URL and receiving generated text they are unhappy with, there is no obvious way to manually rewrite or override the bio. The text is technically editable, but the biography text area does not visibly signal this, and the only visible actions (Publish / Back to search) suggest there is no path back to manual editing.	Anand / Sathish
4	Conceptual Reframing of the Defect	Indeevar reframed the core requirement away from "LinkedIn fetch not working" toward "how does a user create a public-view profile with a clear way to correct and refine it" — i.e. a smooth path from auto-extract/generation to manual correction, supplementation, or full rewrite.	Discussion Point
5	Nature of Defect — Design vs. Functional	Indeevar mentioned this is primarily a design/logical-flow defect, not a simple functional bug, since downstream testers working from "yes, technically you can edit" are likely to pass it without catching the deeper UX problem. Agreed the team should be more self-critical ("hostile to itself") on logical/UX flaws than on straightforward functional bugs.	Discussion Point

#	Topic / Module	Discussion / Observation	Owner
6	"Unnamed Group" Landing — Testing Gap	The default "Unnamed group" landing behaviour seen in 1.3 had already been raised by the testing team (Hemnath, rendered "Hemna" in the source transcript) but was not caught in component testing. Indeevar flagged concern over how a known, already-raised issue was missed.	Discussion Point
7	Testing & Code-Review Commitments	Sathish acknowledged that tight cycle-1/cycle-2 deadlines had let some hardcoded/static data slip through, and that unit tests had focused more on functionality than on static content or full-flow coverage. Committed to personally review unit tests and static content per commit, block hardcoded values from production, and expand coverage to catch flow and static-text issues.	Sathish
8	Core MVP Status vs. Golf / DLT / Promo Work	Indeevar noted that a large part of recent weeks (since ~23 July) went into Golf/DLT/promotional-notification work, and that he had assumed core non-golf functionality was essentially complete and component-tested by the original 23 July go-live target. It is now clear much of that core work remains in progress. Requested clearer ongoing communication on what is "frozen" vs. still evolving.	Discussion Point
9	Top Priorities for 1.3 — Discussion	The group discussed and stack-ranked the top items for 1.3: end-to-end login & onboarding (highest priority, non-negotiable "same runway" experience), reunion enablement (polls, cost estimation, RSVP, analytics), media posting (photos/videos), and profile/bio flows (fourth, unless very low effort).	Discussion Point
10	Reunion Enablement — Rationale	Indeevar stated that if forced to choose between profile work and reunion-planning features, he would pick reunion planning every time, since these features directly address the core problem that "9 out of 10 reunions don't actually happen," and are what he wants to demonstrate to real users/clients.	Discussion Point
11	1.3 Release Content & Documentation	1.3 will include fixes (login/onboarding, profile UX, unnamed-group landing) plus new capabilities versus 1.2 (e.g. statistics/analytics screens, additional editing capabilities). Lakshmi to maintain and share a decision-points Excel and an updated 1.3 observations/new-functionality sheet.	Lakshmi / Nishalini
12	Post-Release Iteration Plan	Indeevar set an expectation that the 36–48 hours after 1.3 goes live be dedicated to iterative testing of login/onboarding, member addition, reunion poll/cost/RSVP flows, and analytics, with feedback and usage data collected to validate real-world impact.	Discussion Point

4. Key Decisions

#	Decision	Rationale / Impact
D1	Add a clear "Edit / Review the text" control on the biography/profile screen; clicking it auto-focuses the biography text area, making clear the AI-generated text is editable and can be partially or completely rewritten.	Treats the currently hidden/implicit editability of the generated bio as a legitimate, important requirement — a discoverability and user-control fix, not a cosmetic one.
D2	The core issue is how the user enters and edits profile data, not whether LinkedIn scraping works. LinkedIn URLs remain stored (not scraped); bio text continues to come from profile fields or pasted text plus AI generation; the anchor must always have a clear path to manual override.	Reaffirms the platform's existing no-LinkedIn-scraping position and redirects remediation effort to the actual UX gap rather than a non-viable scraping fix.
D3	Treat design/logical-flow defects as first-class defects, not lower priority than functional issues; be ready to classify such issues more severely because they are harder for downstream testers to catch and have a larger impact on user experience and product perception.	Prevents UX/flow problems from being under-classified simply because a narrow functional test would technically pass them.
D4	Investigate why the "Unnamed group" landing issue was missed in component testing despite being raised, and strengthen unit testing and code review — Sathish to personally review unit tests and static content per commit, block hardcoded values, and expand coverage to catch flow/static-text issues.	Closes the gap between issues being raised by testers and issues actually being caught in component testing before release.

#	Decision	Rationale / Impact
D5	Going forward, the team will give clear, explicit communication on which parts of the product are "frozen" vs. still evolving, so expectations are set accurately and surprises (such as core flows still being in progress) are avoided.	Addresses Indeevar/Indira's concern that core non-golf functionality was assumed complete since 23 July when substantial component testing remained outstanding.
D6	v1.3 priority stack rank agreed: (1) end-to-end login & onboarding — highest priority, non-negotiable; (2) reunion enablement — polls, cost estimation, RSVP, analytics; (3) media posting — photos/videos; (4) profile/bio flows, unless very low effort to fix, in which case it can move earlier.	Focuses remaining 1.3 effort on the flows with the greatest first-impression and real-world-value impact (reunions actually happening) ahead of secondary features.
D7	Lakshmi to maintain and share a decision-points Excel (product decisions and rationale, including new points from this meeting) and Nishalini to share a separate updated 1.3 inventory sheet listing all issues/observations fixed in 1.3 and all new functionality versus 1.2 (e.g. statistics screens).	Gives the client transparent, auditable visibility into what is shipping in 1.3 and why, consistent with the project's existing Decision Records practice.
D8	Once 1.3 goes live, run focused iterative testing sessions over the following 36–48 hours covering login, member/group onboarding, event creation, and polls/cost/RSVP/analytics, and use that window to collect user feedback and usage analytics.	Provides a tight, structured validation window to confirm the release actually improves reunion participation and surfaces friction early.

5. Action Items Register

AI-ID	Area	Action Required	Owner
AI-2508-01	UX	Update the profile/biography screen so users clearly see the AI-generated biography text is editable — add a prominent "Edit / Review the text" link/button that auto-focuses the biography text area when clicked.	Dev team
AI-2508-02	Testing / QA	Investigate why the "Unnamed group" landing issue was missed in component testing despite being raised by the testing team; confirm why coverage did not catch it and adjust test suites/scenarios accordingly.	Sathish
AI-2508-03	Testing / QA	Strengthen unit testing and code review for static content and flows: personally review unit tests and static content for each commit, ensure no hardcoded values reach production, and expand tests to cover static text and simple flow conditions, not just functional outcomes.	Sathish
AI-2508-04	Documentation	Compile and send the updated decision-points document (Excel) listing product decisions and related discussion points, including additions made since the prior day's meeting.	Lakshmi
AI-2508-05	Documentation	Prepare and send an updated sheet summarising all observations/issues being fixed in the 1.3 release and any new functionality versus 1.2 (e.g. statistics screens and other 1.3 enhancements).	Nishalini

6. Next Steps

- Ship the biography-screen "Edit / Review the text" control (auto-focus on click) and document the LinkedIn-URL-vs-manual-bio flow.
- Close out the root-cause investigation into the "Unnamed group" component-testing miss and adjust test coverage accordingly.
- Sathish to begin per-commit review of unit tests and static content, with no hardcoded values reaching production.
- Lakshmi to circulate the decision-points Excel
- Nishalini to share 1.3 release functionality sheet
- Sequence remaining 1.3 work against the agreed stack rank: login/onboarding first, then reunion enablement, then media posting, then profile/bio.
