alumnye — Functional requirement document

Version 1.4

Modules Covered: 6

Planned Items

#	Module	Description
1	**Event Category-based Tiles & List**	Event tiles and listing UI updated to support category-based grouping.
2	**Multi-Anchor Support**	Extends the single-anchor member model to support multiple anchors per group.
3	**D4 Poll — Destination Step**	Year and Month/Date steps (Steps 1 & 2) merged into a single Duration step. The Destination step (Step 4) now combines domestic and international options together.
4	**Member Profile**	As a member user, able to generate their own profile.
5	**Golf Module**	All defects logged against the Golf Module are planned to be fixed and included in this release. Defect IDs: ALM-1.3-086, 087, 088, 092, 093, 094, 108, 109, 110, 111, 112, 113.

Detailed Feature Descriptions

1. Event Category-based Tiles & List

Functionality

During event creation, the Anchor assigns the event to a category. The event listing and tile display are updated to group events by category, making it easier for members to browse events by type. In this release, the Reunion and Sports categories have been updated with their own dedicated tile sets; all remaining categories continue to share a common, reduced tile set.

Flow

1. Group is created.
2. Anchor initiates event creation for the group.
3. During event creation, the Anchor selects an event category from: Reunion, Sports, Networking, Professional, Social, Cultural, or Other.
4. In this release, only the Reunion and Sports categories have their own updated, category-specific tile sets. All other categories continue to use a shared, common tile set.
5. For the Reunion category, the tiles displayed are: Poll, CostGPT, Itinerary, Launch RSVP, Travel, Preference, Library, and Payment.
6. For the Sports category, the tiles displayed are: Poll, Launch RSVP, Golf, Library, and Payment.
7. For all other categories — Networking, Professional, Social, Cultural, and Other — only the following tiles are displayed: Poll, Launch RSVP, Library, and Payment.
8. The event is displayed as a tile under its selected category in the event listing.

2. Multi-Anchor Support

Functionality

Extends the existing single-Anchor group model to support multiple Anchors within a single group. An existing Anchor can promote a Member to the Anchor role. A group may then have more than one active Anchor at the same time. Every Anchor in the group — whether original or promoted — holds the same permissions.

Flow

1. The group initially had a single Anchor.
2. The existing Anchor selects a member and changes that Member's role to Anchor.
3. The group can now have multiple Anchors active at the same time.
4. Any Anchor in the group can perform the full set of Anchor-level actions, matching the original Anchor's permissions.
5. Original Anchor (Group creator) cannot be Demote Anchor.

Anchor Role Permission Parity

Action	Original Anchor	Promoted Anchor
Poll creation	Yes	Yes
Poll override	Yes	Yes
Poll finalization	Yes	Yes
CostGPT generation	Yes	Yes
Itinerary upload / edit / delete	Yes	Yes
RSVP creation	Yes	Yes
Library items upload / delete	Yes	Yes
Event creation	Yes	Yes
Member invitation	Yes	Yes
Group management	Yes	Yes

3. D4 Poll — Destination Step

Functionality

The D4 poll flow has been updated in two places. First, the Duration step has been simplified — Step 1 (Year selection) and Step 2 (Month and Date selection) are now merged into a single Duration step. Second, the Destination step (Step 4) has been updated so domestic and international destination options are combined into one view, instead of being selected across two separate steps.

Flow

1. Anchor initiates a D4 poll for the group.
2. Previously, Step 1 captured the Year and Step 2 captured the Month and Date as two separate steps.

3. In this release, Steps 1 and 2 are merged into a single Duration step, where the Anchor selects the year, month, and date together.

4. The Anchor then proceeds to Step 4, the Destination step.

5. In the earlier flow, the Anchor selected domestic destinations and international destinations in two separate steps.

6. Now, domestic and international destination options are combined into a single view within the Destination step, so the Anchor can choose from both together.

4. Member Profile

Functionality

Members can now generate their own profile within the app. This includes the underlying app analytics and AI-assisted profile generation work delivered alongside this feature.

Flow

1. Member navigate to My Groups and view the members list.
2. Member clicks on their own profile.
3. Member selects the Generate AI Profile option.
4. Member clicks Generate to create their profile.

5.Golf Module — Defect Fixes

Functionality

All open defects logged against the Golf Module are addressed in this release. The fixes cover the full set of issues tracked in the defect log sheet and are pending verification before sign-off.

Defect IDs Included

ALM-1.3-086, ALM-1.3-087, ALM-1.3-088, ALM-1.3-092, ALM-1.3-093, ALM-1.3-094, ALM-1.3-108, ALM-1.3-109, ALM-1.3-110, ALM-1.3-111, ALM-1.3-112, ALM-1.3-113.
